L1	0	"A device assembly which includes at least one component which can benefit from protection, the assembly comprising: a housing for the device assembly, a component on the housing, a protective cover panel slidably mounted respect to the housing and moveable between first and second positions relative to the housing so as to selectively provide a protective cover over, or access to, the component, and an area including a substrate having at least one image thereon, which substrate is positioned adjacent to the cover panel and which area is used to selectively provide to a user of the device assembly a view of the at least one image (Image 2, Image 3, or Image 2+3), wherein when the cover panel is in	US-PGPUB; USPAT; USOCR; FPRS; EPO; JPO; DERWENT; IBM_TDB	OR	OFF	2008/06/25 10:49

the first position it is aligned with the component so as to form a protective cover over the component and the at least one image on the substrate of area is positioned behind a portion of the device assembly and thereby hidden from the view of the user, and as the cover panel is moved from the first position to the second position, the component becomes progressively more accessible to the user of the device, and the area is progressively moved so as to extend past the housing of the device so that the at least one image thereon becomes progressively more visible to the user".clm.

L2	0	<p>" A method for providing a visual effect on device assembly which includes at least one component which can benefit from protection, the method comprising: providing a housing for the device assembly, providing a protective cover panel slidably mounted respect to the housing and moveable between first and second positions relative to the housing so as to selectively provide a protective cover over, or allow access to, a component of the housing, and providing an area including a substrate having at least one image thereon, which substrate is selectively positioned adjacent to the cover panel for selectively displaying to a user of the device assembly a view of at least one image (Image 2, Image 3, or Image 2+3), wherein when the cover panel is in the first position it is aligned with the</p>	<p>US-PGPUB; USPAT; USOCR; FPRS; EPO; JPO; DERWENT; IBM_TDB</p>	OR	OFF	2008/06/25 10:51

		<p>component so as to form a protective cover over the component and the at least one image on the substrate of area (18) is positioned behind a portion of the device assembly and thereby hidden from the view of the user, and as the cover panel is moved from the first position to the second position, the component becomes progressively more accessible to the user of the device, and the area is moved so as to progressively extend past the housing of the device and thereby progressively reveal more of the at least one image provided".clm.</p>				
L3	0	<p>"A device assembly which includes at least one component which can benefit from protection, the assembly comprising: a housing for the device assembly, a component on the housing, a protective cover panel slidably mounted respect</p>	<p>US-PGPUB; USPAT; USOCR; FPRS; EPO; JPO; DERWENT; IBM_TDB</p>	OR	OFF	<p>2008/06/25 10:53</p>

to the housing and moveable between first and second positions relative to the housing so as to selectively provide either a protective cover over, or access to, the component, and an area positioned adjacent to the cover panel and used to provide to a user of the device assembly a view of at least one image, the area comprising a slidable device coupled with the cover panel, the slidable device including first and second image substrates positioned relative to the housing so as to be moveable in conjunction with movement of the cover panel, said first and second image substrates being configured so that a combined image from both substrates is visible to a user of the device assembly when the cover panel is in the second position, but only the image from one substrate is visible to the user in the area when the cover panel is in the first

		position, and wherein when the cover panel is in the first position it is aligned with the component so as to form a protective cover over the component, and as the cover panel is moved from the first position to the second position, the component is progressively more accessible to the user of the device, and the area is progressively moved so as to extend past the housing of the device, thereby progressively allowing the combined image from both substrates to be more visible to the user".clm.				
L4	0	" A device assembly which includes at least one component which can benefit from protection, the assembly comprising: a housing for the device assembly, a component on the housing, a protective cover panel slidably mounted respect to the housing and moveable between first and	US-PGPUB; USPAT; USOCR; FPRS; EPO; JPO; DERWENT; IBM_TDB	OR	OFF	2008/06/25 10:54

second positions relative to the housing so as to selectively provide either a protective cover over, or access to, the component, and an area positioned adjacent to the cover panel which is used to provide to a user of the device a view of at least one image, wherein when the cover panel is in the first position it is aligned with the component so as to form a protective cover over the component, and as the cover panel is moved from the first position to the second position, the component is progressively more accessible to the user of the device, and the area is progressively moved so as to extend past the housing of the device, and wherein a first image is printed on an outside facing portion of the housing that is adjacent to the component, so that when the cover panel is in the first position the first image is

		aligned with the area, and when the cover panel is moved toward the second position, a second image is progressively revealed in the area in coordination with the movement of the cover panel". clm.
